About the IEC

The International Electrotechnical Commission (IEC) is the leading global organization that prepares and publishes International Standards for all electrical, electronic and related technologies.

About IEC publications

The technical content of IEC publications is kept under constant review by the IEC. Please make sure that you have the latest edition, a corrigendum or an amendment might have been published.

IEC publications search - webstore.iec.ch/advsearchform

The advanced search enables to find IEC publications by a variety of criteria (reference number, text, technical committee,...). It also gives information on projects, replaced and withdrawn publications.

IEC Just Published - webstore.iec.ch/justpublished

Stay up to date on all new IEC publications. Just Published details all new publications released. Available online and once a month by email.

IEC Customer Service Centre - webstore.iec.ch/csc

If you wish to give us your feedback on this publication or need further assistance, please contact the Customer Service Centre: sales@iec.ch.

Electropedia - www.electropedia.org

The world's leading online dictionary on electrotechnology, containing more than 22 000 terminological entries in English and French, with equivalent terms in 16 additional languages. Also known as the International Electrotechnical Vocabulary (IEV) online.

IEC Glossary - std.iec.ch/glossary

67 000 electrotechnical terminology entries in English and French extracted from the Terms and Definitions clause of IEC publications issued since 2002. Some entries have been collected from earlier publications of IEC TC 37, 77, 86 and CISPR.

OD-300 ME Certification Scheme: Test Report Requirements

2 Normative references	3
3 Informative references	3
4 Scope of Test Report.....	3
5 Articulation with other Scheme deliverables	4
6 Content of Test Report	4
7 Issuing Party	4

1 Scope of this document

- This Operational Document (OD) addresses the issuance of a Test Report (TR) within the framework of IECRE ME Certification Scheme. The following topics are addressed in the present OD:
- Normative References
- Informative References
- Scope of Test Report
- Articulation with Scheme deliverables
- Content of Test Report
- Issuing party

2 Normative references

The Normative References are provided below. Standards against which TRs can be issued (in particular the series IEC 62600 Marine energy - Wave, tidal and other water current converters) are listed on the IECRE website (www.iecre.org). The most current edition should be used in all cases.

- IEC CA 01 – Basic Rules for IEC Conformity Assessment Systems
- IECRE 01-S – IECRE 01-S Supplement to IEC CA 01
- IECRE 02 – Rules of Procedure
- IECRE 03 – ME Sector Rules of Procedure

3 Informative references

The following IEC standards, based on the wind sector, may be used by the ME Sector to issue Test Reports but will require adaptation before implementation.

- IEC 61400-13:2015 Wind turbines - Part 13: Measurement of mechanical loads, to be read in conjunction with IECRE OD-551-13
- IEC 61400-23:2014 Wind turbines - Part 23: Full-scale structural testing of rotor blades

4 Scope of Test Report

The TR is one of the ME Scheme Deliverables, issued to document a specific test conducted in accordance with one or several international standards. The objective of the TR is to document the measurement conditions, instrumentation, calibrations, procedures, results, analyses, etc. of the considered test.

An indicative list of activities concerned by the issuance of a TR is provided below:

- Power Performance assessment according to IEC/TS 62600-100, IEC/TS 62600-102, IEC/TS 62600-200 and IEC/TS 62600-300
- Loads Measurements according to IEC/TS 62600-3
- Note: While there is only one available Technical Specification in the IEC 62600 series for mechanical load assessment so far, IEC 61400-13 and IECRE OD-551-13 may serve as additional guidance for the test.
- Power Quality according to IEC/TS 62600-30
- Acoustic Characterization according to IEC/TS 62600-40
- Safety and Function Tests
- Tests identified under the Technology Qualification and Certification Plan requiring a TR
- Any other test identified under other specific IEC TS not referred to above

5 Articulation with other Scheme deliverables

TR can be issued in a standalone purpose, but are also included into other Scheme deliverables such as Type Certificate or Project Certificate.

Note: Examples of certification modules from other Scheme deliverables requiring TR:

- Type certification: "Type testing" module requiring a power performance measurement TR and a load measurements TR
- Project certification: "Project characteristics measurements" module requiring a power performance measurement TR

The TR can be evaluated by an RECB as a part of a certificate issuance. A satisfactory evaluation is concluded with a Conformity Statement and an Evaluation Report issued by the RECB.

6 Content of Test Report

The first section is a cover page (applicable to all TR and common for all Sectors) that contains the general information, such as:

- the name and address of the Applicant,
- report reference number,
- standard used,
- TR number,
- product name and product rating,
- trademark,
- other relevant information.

Pages that follow the cover page contain specific information related to:

- testing procedure and testing locations,
- list of attachments,
- product under testing,
- general tests and samples information,
- other relevant information.

A Test Report template will be provided in an OD and shall be used by the issuing party.

7 Issuing Party

The TR is issued by the party conducting the test. This issuing party can be:

- An RETL. This test can be conducted:
 - a) in its own premises
 - b) at a location determined by the applicant,

The applicant may issue the results of testing, provided an RECB is engaged from the beginning of the testing process¹.

¹ This alternative option is provided for technology developers who are unable to test at an RETL or are unable to have an RETL come to a facility of their choosing for the tests. This option will not result in the issuance of a Test Report.
